

EcoFINDERS – FP7-ENV-2010-264465

**Seventh Framework Programme
Theme 6
Environment (including Climate Change)**

Collaborative project

***Deliverable D 6.2
Creation of website***

Due date of deliverable: M 3

Actual submission date: M 5

Start date of the project: January 1st, 2011

Duration: 48 months

Organisation name of lead contractor: AU

Revision: V 1

Dissemination Level	
Public	PU

OVERVIEW	3
CREATION OF WEBSITE	3
CONCLUSION	5

Overview

An essential mode of communication and outreach of the EcoFINDERS project is via a website of the project. This website has been created at www.ecofinders.eu and will be developed further during the project period as the project show progression.

Front page of the website: www.ecofinders.eu

Creation of website

A major responsibility of research is to communicate the results to the general public to enlighten and to raise awareness of the significance of biodiversity. In EcoFINDERS, we take this task very serious and a wider audience are targeted by electronic communication means, especially a dynamic website presenting the project. Our ambition is that the website should be visited often and by both general public, stakeholders and scientists.

The website is constructed in a way to present the project to a wider audience and also facilitate information to the scientific community including the EcoFINDERS participants. In this initial phase of the project the information on the website is mainly plans for the project, e.g. the description of the workpackages is presently based on the present plans. However, as the project progresses, results, including outreach activities like conference presentations, national and international publications will be presented at the website. Indeed, already several PhD-positions within EcoFINDERS are posted here as well as several different workshops and conferences of interest to scientist working within the field of EcoFINDERS.

At the website the objectives of the project is described, as are the individual workpackages, ecosystem services and the LTOs. Furthermore information and contact details of all the

participants, publications so far (this will be continuously updated) and announcements of open positions and scientific conferences, workshops and symposiums are also presented.

Conclusion

The website is not yet completed and never will be as it is a dynamic website that we intend to update and develop further during the project period.
